

Quick Facts

*Turning down thermostat just three degrees is hardly noticeable but households can save up to 10% per year

*Auto Manufacturers recommend changing your engine oil every three thousand miles, but most mechanics agree it is necessary only once every five thousand miles

*Families can save on insurance by reviewing what is included in their home/car insurance, and eliminating services they don't need, for instance if you have roadside service through your cell provider, this can mean savings on your auto insurance

*Check with cell provider for roadside coverage/Contact auto manufacturers as well since roadside is sometimes included

*Wash laundry with cold water-cleans just as well, and newer washers automatically warm the water.

*Unplug all chargers and cords that are not being used-as they still draw energy, thus increasing electricity bill.

*Changing all your light-bulbs in your home to the new compact fluorescent bulbs uses about 75% less energy, be sure they are ENERGY STAR qualified. Here's an interesting fact from ENERGY STAR:

Did You Know?

The typical household spends \$1,900 a year on energy bills. With ENERGY STAR, you can save up to 30% or more than \$600 per year.

Compact fluorescent bulbs should be handled carefully. Please refer to the Environmental Protection Agency website for helpful tips and guidelines for safely installing and disposing of these bulbs
